

CAPABILITY STATEMENT

IETLINK.COM

IETLink delivers advanced real-time instrumentation and industrial telemetry data solutions that provide continuous support of site operations optimization and compliance assurance. IETLink serves a variety of municipal, industrial, and mining clients with autonomous, low-bandwidth cellular-based solutions that meet demanding field conditions and communication logistics in an affordable manner. IETLink solutions bring the most remote and difficult data streams together to one point for simultaneous assessment and use across organizations, from the team in the field, to the site engineer, and up to the Executive team. IETLink clients in the landfill, renewable natural gas (RNG), wastewater, municipal, and mining sectors have found significant returns on investment from using the IETLink cloud-based platform that integrates field sensors, wireless communications, and customizable dashboards to monitor site parameters. From direct measurements of field data like liquid levels, temperature, vacuum, pressure, flow rates, voltage and current, site operations can be assessed in terms of pump performance, groundwater conditions, slope stability, stormwater capacity, flare operation, tank status, condensate systems diagnostics, and other critical performance and compliance criteria. Real-time continuous monitoring and simultaneous data evaluation also enable proactive maintenance, rapid issue identification, automated alerts, compliance demonstration, and data-driven decision-making. Long-term benefits include operational continuity, worker safety, and infrastructure resilience through reduced downtime, minimized maintenance costs, and overall operational performance across complex environmental and industrial facilities.

CORE COMPETENCIES

- Real-Time Environmental Monitoring & Compliance
- Legacy Data Systems Integration & Integration of Existing Systems
- Low Power Wireless Sensor Networks & Industrial IoT Integration
- Historical Data Analytics, Trend Analysis & Predictive Maintenance
- Cloud-Based Status Monitoring Dashboards & Data Visualization
- 24/7 Asset Monitoring & Automated Alert Notifications
- Landfill Gas (LFG) Monitoring & Collection System Management
- Mining Surface Water Management and Compliance Assurance
- Renewable Natural Gas (RNG) Infrastructure Monitoring
- Meteorological Data Collection & Archiving
- Leachate Collection, Storage & Pump System Monitoring
- Groundwater Monitoring & Environmental Compliance Support
- Stormwater Management & Drainage System Monitoring
- Slope Stability & Geotechnical Monitoring
- Tank, Condensate, Flare & Force Main Monitoring
- Pressure, Temperature, Flow Rate & Liquid Level Monitoring
- Remote Asset Management & Operational Performance Optimization
- Infrastructure Risk Mitigation, Safety & Regulatory Compliance Support

COMPANY SNAPSHOT

CAGE: 5YLD2 **UEI:** QK4DSM56Y1Z2

Gov. Business POC: Randall Adkins

Phone: (419) 351-1670

E-Mail: radkins@ietteam.com

Address: 6450 Bendelow Dr, Lakeland, FL 33810

Work Area: Nationwide

Socio Economic: Veteran-Owned Small Business

Ask about buying direct through the Federal GSA Contract

PAST PERFORMANCE

The Mosaic Company | 2024-2026

Hernando Co Solid Waste & Recycling Division | 2011 - 2026

Waste Management Chesser Island Road Landfill | 2011 - 2026

Waste Management Springhill Regional Landfill | 2012 - 2025

Waste Management Trail Ridge Landfill | 2010 - 2026

DIFFERENTIATORS

- Subscription-based IoT environmental monitoring platform providing real-time data collection, data dashboard access, automated alerts, reporting, and device management across distributed field sensor networks.
- Modern, resilient, and secure IT Cloud services for 24/7 365 Access.
- Expertise in low-power and low-bandwidth cellular applications.
- Integrated information planning for visibility into landfill, industrial, mining, municipal, wastewater, stormwater operations, and related environmental systems.
- Highly Manageable automated alerts for rapid response and reduced downtime.
- Priority monitoring of critical infrastructure, including gas, leachate, pumps, tanks, and groundwater systems.
- Anomaly detection in pressure, flow, temperature, and level measurements.
